DESCRIPTORS Communication Skills; *Job Analysis; Knowledge Level; *Occupational Information; Radio Technology; Safety; *Service Occupations; Skill Analysis; Skill Development; *Task Analysis; Task Performance; *Television Repairmen; Work Attitudes

ABSTRACT

The general purpose of the occupational analysis is to provide workable, basic information dealing with the many and varied duties performed in the television and radio service occupation. The document opens with a brief introduction followed by a job description. The bulk of the document is presented in table form. Eight duties are broken down into a number of tasks and for each task a two-page table is presented, showing on the first page: tools, equipment, materials, objects acted upon; performance knowledge (related also to decisions, cues and errors); safety--hazard; and on the second page: science; math--number systems; and communications (performance modes, examples, and skills and concepts). The duties include: repairing phonographs, tape recorders, AM and FM radios, and wireless intercommunication sets; servicing television sets; and installing and repairing TV antenna systems and wired intercommunication systems. Lists of basic radio-TV repair hand tools and equipment for a radio-TV standard bench are appended. (BP)

FOREWORD

The occupational analysis project was conducted by The Instructional Materials Laboratory, Trade and Industrial Education, The Ohio State University in conjunction with the State Department of Education, Division of Vocational Education pursuant to a grant from the U.S. Office of Education.

The Occupational Analysis project was proposed and conducted to train vocational educators in the techniques of making a comprehensive occupational analysis. Instructors were selected from Agriculture, Business, Distributive, Home Economics and Trade and Industrial Education to gain experience in developing analysis documents for sixty-one different occupations. Representatives from Business, Industry, Medicine, and Education were involved with the vocational instructors in conducting the analysis process.

The project was conducted in three phases. Phase one involved the planning and development of the project strategies. The analysis process was based on sound principles of learning and behavior. Phase two was the identification, selection and orientation of all participants. The training and workshop sessions constituted the third phase. Two-week workshops were held during which teams of vocational instructors conducted an analysis of the occupations in which they had employment experience. The instructors were assisted by both occupational consultants and subject matter specialists.

The project resulted in producing one hundred two trained vocational instructors capable of conducting and assisting in a comprehensive analysis of various occupations. Occupational analysis data were generated for sixty-one occupations. The analysis included a statement of the various tasks performed in each occupation. For each task the following items were identified: tools and equipment; procedural knowledge; safety knowledge; concepts and skills of mathematics, science and communication needed for successful performance in the occupation. The analysis data provided a basis for generating instructional materials, course outlines, student performance objectives, criterion measures as well as identifying specific supporting skills and knowledge in the academic subject areas.

PREFACE

The approach in performing this task analysis was to orient thoughts on a plane so as to include as many equipment-oriented tasks as possible. By limiting the analysis to common methods of electronic servicing the sub-task list is limited to those items that an employer expects his/her employees to be able to do. The basic motor skills expected of a mechanic (e.g. using hand tools) are not included.

General knowledge requirements for an understanding of basic electronics theory are assumed and only the specific areas of science required for the performance of a task are referenced.

The detail requirements for successful performance of a task are outlined with emphasis being placed on one's ability to read and interpret manufacturer's technical data and to perform schematic analysis.

There are no supervisory duties included in this analysis.

ACKNOWLEDGMENT

We wish to acknowledge the valuable assistance rendered by the following subject matter specialists. They provided input to the vocational instructors in identifying related skills and concepts of each respective subject matter area and served as training assistants in the analysis process during the two-week workshops.

JOB DESCRIPTION

Television and radio service technicians install and repair home electronic entertainment products. These products include television, radios, phonographs, high-fidelity and stereophonic sound equipment, intercommunication equipment, tape recorders, etc.

The service technician's job is to check and evaluate each possible cause of trouble, repair or replace defective parts, perform alignments and make adjustments.

Service technicians must be able to use basic hand tools, read and interpret schematic diagrams and other technical data, make electrical checks with test instruments, evaluate test results, estimate and compute cost of repairs, and practice good customer relations.

Duty A Repairing Phonographs

- 1 Make preliminary repair estimate (phonographs)**
- 2 Repair changer mechanism**
- 3 Repair power supply**
- 4 Repair audio amplifier**

(TASK STATEMENT) MAKE PRELIMINARY REPAIR ESTIMATE (PHONOGRAPHS)

12

TOOLS, EQUIPMENT, MATERIALS, OBJECTS ACTED UPON	PERFORMANCE KNOWLEDGE	SAFETY - HAZARD
Radio-TV repair hand tool list (see index 1) Test record	Verify customer complaint Analyze performance through obser- vation and manipulation of controls Compute estimated cost of repair	Hazard: Electrical shock-electrical burn Possible heat burns Safety: Avoid direct contact with any voltage source Avoid direct contact with hot compo- nent
<u>DECISIONS</u> Estimate cost of parts and labor	<u>CUES</u> Improper indexing Improper tracking Improper speed Improper audio output	<u>ERRORS</u> Large discrepancy between estimate and actual cost

(TASK STATEMENT) REPAIR HIGH VOLTAGE SUPPLY SECTION

TOOLS, EQUIPMENT, MATERIALS, OBJECTS ACTED UPON	PERFORMANCE KNOWLEDGE	SAFETY -- HAZARD
<p>Radio-TV repair hand tool list (see index 1)</p> <p>Radio-TV standard bench: work bench VTVM, vacuum tube voltmeter (with high voltage probe) oscilloscope isolation transformer vacuum cleaner tube tester transistor tester capacitor checkers</p>	<p>Select appropriate technical data Remove chassis from cabinet; visually inspect section and correct obvious defects; performance test and trouble-shoot; identify faulty component(s); remove and replace faulty components; make high voltage adjustments Rule of thumb: normal procedure when replacement of a tube or the fly-back transformer in the high voltage section is required, all tubes in this section should be replaced. When removing a flyback transformer, care must be exercised to "flag" all connections and make a simple drawing of physical wire connections. High quality lead dress and solder connections are essential to prevent corona. Do not permit set to run with voltages higher than manufacturer's specifications.</p>	<p>Hazard: Electrical shock/burn Heat burns</p> <p>Safety: Extreme caution is necessary when working in this section; hazardous voltages exist Do not move or touch high-voltage plate caps or connecting leads until receiver is turned off and high voltage capacitors and picture tube have been discharged Insure no evidence of corona or arcing is present after repair</p>
<u>DECISIONS</u>	<u>CUES</u>	<u>ERRORS</u>
<p>Isolate trouble in stage for repair Select replacement parts Determine proper operation Insure high voltage dropout feature is functioning</p>	<p>No raster, sound OK Very dim, enlarged raster and sound is OK Poor focus receiver otherwise OK Changes of size with screen changes Color fringing and sound OK Arcing, corona and the smell of ozone Circuit breaker open</p>	<p>Action fails to correct malfunction Excessive labor cost for trouble-shooting Accidental damage to good components Unnecessary replacement of good components</p>

(TASK STATEMENT) INSTALL TV

TOOLS, EQUIPMENT, MATERIALS,
OBJECTS ACTED UPON

Radio-TV repair hand tool list (see
index 1)
Color bar generator
VTVM
De-gaussing coil

PERFORMANCE KNOWLEDGE

Connect receiver at its proper location
and allow approximately 10 minutes for
warm-up
Adjust AGC for location, if required
De-gauss receiver
Inspect receiver for purity and conver-
gence; perform color set-up, if
required
Instruct the customer in proper opera-
tion of receiver

SAFETY — HAZARD

Hazard:

Electrical shock - electrical burn
Possible heat burns
Possible implosion of CRT

Safety:

Avoid direct contact with any voltage
source
Avoid direct contact with any vacuum
tube
Protect picture tube during transpor-
tation

Equipment hazard:

Damaging cabinet during transportation

DECISIONS

Determine location of set (near an-
tenna, away from motors, slightly
away from wall and pleasing to
customer)
Determine proper operation

CUES

New receivers are fully factory ad-
justed
No adjustments should be required or
attempted unless absolutely necessary

ERRORS

Customer relations damaged

<u>DECISIONS</u> Select replacement parts Determine proper operation	<u>CUES</u> No output Low volume Distortion Motorboating Noise	<u>ERRORS</u> Action fails to correct malfunction Excessive labor cost for trouble-shooting Accidental damage to good components Unnecessary replacement of good components

MATH — NUMBER SYSTEMS	
Given an instrument of measure, determine precision, and/or accuracy with respect to manufacturer's specifications (test instrument scales) Given a coding system, recognize and identify each unit involved by assigning necessary symbols, numerical or literal (resistor capacitor) Addition and subtraction of decimal fractions Multiplication and division of decimal fractions (cost of repairs)	

SCIENCE	
Effect of heating and cooling on state of matter (Change of dimensions) [solid-state devices] Resistance of materials to flow of electrical current Principles of transistor amplifiers Principles of ohms law Principles of electric power Principles of vacuum tube amplifiers Vacuum tube characteristics Solid-state device characteristics Principles of interaction of circuitry	

COMMUNICATIONS		
<u>PERFORMANCE MODES</u>	<u>EXAMPLES</u>	<u>SKILLS/CONCEPTS</u>
Reading	Interpret equipment specifications Technical reference manuals Interpret schematic diagrams Interpret repair warranty	Comprehension, detail/inference, information report, description of mechanism, definition, terminology, instructions
Writing	List parts and services for billing	Classification, description
Speaking	Explain repair warranty	Terminology, enunciation, clarity of expression, logic

(TASK STATEMENT) MAKE PRELIMINARY REPAIR ESTIMATE

101

TOOLS, EQUIPMENT, MATERIALS, OBJECTS ACTED UPON	PERFORMANCE KNOWLEDGE	SAFETY -- HAZARD
Radio-TV repair hand tool list	Verify complaint Analyze performance through observation and manipulation of controls Compute estimated cost of repairs	Hazard Electrical shock-electric burns Heat burns-hot components Safety Avoid direct contact with voltage sources Avoid contact with heat sources
Determine estimate of cost of repairs and labor	<u>CUES</u> No receive, send OK No send, receive OK No send and receive Hum in speaker Buzz in speaker Motorboating or oscillation Smoke Electrical shock to user	<u>ERRORS</u> Action fails to correct malfunction Excessive labor cost for trouble- shooting Accidental damage to good components Unnecessary replacement of good components

ASK STATEMENT) MAKE PRELIMINARY REPAIR ESTIMATE

TASK STATEMENT(1) MAKE PRELIMINARY REPAIR ESTIMATE		MATH - NUMBER SYSTEMS	
SCIENCE		Addition and subtraction of decimal fractions Multiplication and division of decimal fractions (cost estimate) Finding a percent of a number and what percent one number is of another (profit mark-up)	
Principles of intercom operation Principles of AM radio receivers Principles of AM transmitters Principles of vacuum tubes Principles of transistors			
COMMUNICATIONS			
PERFORMANCE MODES		EXAMPLES	SKILLS/CONCEPTS
Reading Writing Speaking		Information from customer Interpret repair warranty Estimated cost of repairs Recommend alternative to repairs Explain repair warranty	Comprehension, information report, description of mechanism Classification, description, term- inology Terminology, enunciation, persuasion and sales technique, logic, poise, usage

102

102

103

TOOLS, EQUIPMENT, MATERIALS, OBJECTS ACTED UPON

Radio-TV repair hand tool list

Radio-TV standard bench:

Work bench

VVM, vacuum tube voltmeter

Multimeter

Oscilloscope

Isolation transformer

Battery eliminator

Vacuum cleaner

Tube tester

Transistor tester

Resistor substitution box

Capacitor substitution box

PERFORMANCE KNOWLEDGE

Select: appropriate technical data

Visually inspect and correct obvious defects

Performance test and troubleshoot

Identify faulty components

Remove and replace faulty components

SAFETY -- HAZARD

Hazard-Personal

Electric shock-electric burns

Heat burns-hot components

Hazard-Equipment

Damage to solid-state devices when soldering

Safety-Personal

Avoid direct contact with voltage sources

Avoid physical contact with heat sources

Discharge electrolytic capacitors after removing power

Safety-Equipment

Dissipate heat from solid-state devices when soldering

DECISIONS

Select replacement parts

Determine proper operation

Select correct interconnecting line wire size

CUES

Smoke

Hissing

Hum

Blown fuse

No voltage output

ERRORS

Action fails to correct malfunction

Excessive labor cost for trouble-shooting

Accidental damage to good components

Unnecessary replacement of good components
